

Hey everyone,

Great to see that the recent signal vote on developing a retroactive airdrop proposal was successful!

[mainnet.lido.fi](https://mainnet.lido.fi)

## **Aragon**

The proposed numbers:

- Retroactive airdrop of 0.5% LDO to early stETH users
- Use 11543333 as a cutoff block

Just a couple of thoughts, from a community member's point of view, that I think might be useful to consider.

1. Those who took the risk of staking early on, should be rewarded proportionally. This could be some kind of function of deposit time after genesis and amount staked.
2. Many 0 eth deposits were done, I presume for the sole purpose of benefiting from a potential airdrop. This should not be rewarded. Instead, there could be a minimum threshold in order to be eligible for the airdrop, perhaps 0.5 eth deposited. Higher deposits should be rewarded accordingly.
3. If not included in this proposal, it might be good to consider a separate proposal rewarding LPs given their role in the functioning of the Lido ecosystem.

Interested to hear thoughts on what could be a maximally inclusive and fair way of implementing such a proposal.
