#### Delegate statement

We aspire to enable the long-term adoption of Uniswap as the center of liquidity expansion across the multichain DeFi ecosystem.

What do you want to see happen in Uniswap governance over the next year?

1. Multi-chain expansion: This benefits both Uniswap and the different chains by unlocking liquidity in their ecosystem. We're firm believers in a multi-chain future and we believe that everyone will benefit from such expansions.
2. Concrete and sustainable fee switch solution: A long-discussed topic with many potential mechanisms and trade-offs around each solution. We believe it should be one of the main priorities to solve over the coming year.
3. UI/UX improvements: Adoption doesn't happen without simplicity. We believe that being an LP is a complex operation in order to be profitable; there should be mechanisms in place so that less sophisticated users can visualise metrics such as Impermanent Loss and Fee Collection in Uniswap Dashboards. We'd like to challenge the DAO on considering such improvements.

Reasons for wanting to be a delegate:

We believe in a future where the market share between CEXs and DEXs is evenly split. To enable this adoption, a proactive and flourishing DAO with delegates from all around the world sharing different perspectives or expertise is a must. As a crypto-native market maker and a power-user of Uniswap among other DEXs, we believe we can provide valuable insights to scale liquidity across Uniswap.

Skills and areas of expertise:

Keyrock is a technology-driven digital asset market maker active on 85+ trading venues worldwide. With our proprietary algorithmic technologies, Keyrock provides scalable, adaptable liquidity solutions for marketplaces and asset issuers. Keyrock's aim is to increase the liquidity of financial assets, to make markets accessible and more efficient for all participants. Keyrock was founded in 2017 in Brussels.

Our specialties in trading, DeFi innovation, liquidity management, and treasury management while being a delta-neutral entity can ensure that the Uniswap DAO will always have a power user providing fruitful feedback and ideas for protocol improvements.

What are your views on 3 past Uniswap governance proposals?

Uniswap v3 Gnosis: We're in full support of the expansion into the Gnosis Chain once Security risks & Bridges are evaluated as seen in the proposal.

Uniswap Deployments Accountability Committee: The creation of this committee will enhance efficiencies and we see a lot of value in having valuable members make Governance procedures more streamlined.

Create v3deployments.uniswap.eth subdomain and populate its text fields: The establishment of subdomains for v3 deployments is crucial and we're massive believers in the transparency that ENS domains can provide. Full support of this proposal to avoid malicious deployments.

## Top Issues

Cross Chain deployments

Cross-chain deployments are a crucial step towards expansion of liquidity in DeFi while benefiting Uniswap stakeholders.

Fee switch

Fee switch is a complicated matter that we believe is very important to be solved and applied while benefiting all stakeholders in a compliant way. We look forward to finding a collective solution.

DAO working groups

We would like to discover the idea of creating “expertise Working groups” around multiple verticals and build upon the idea of the Accountability Committee.

Disclosure of Conflicts of Interest:

Keyrock is currently active in Governance for protocols such as Aave.

We will be expanding our Governance participation over protocols that we’re power users of and believe we can provide valuable feedback.
