

Alchemy Provider

The Alchemy SDK makes getting started, shipping builds, and accessing support faster and more streamlined. For instance, it provides high-level access to the `eth_sendPrivateTransaction` and `eth_cancelPrivateTransaction` RPC endpoints.

Benefits of the Alchemy SDK include providing:

1. Automatic management of your Flashbots reputation
2. the SDK takes on the work of actively, and manually, managing your reputation. Learn more about reputation [here](#)
3. A superset of the ethers.js Provider library plus the suite of Alchemy APIs
4. the Alchemy Provider exposes all Flashbots JSON-RPC endpoints. The Flashbots API can be used natively with the core EVM APIs as well as the suite of Alchemy APIs
5. Webhook based notifications on [included and dropped private transactions](#)
