

Safe React Hooks

The Safe React Hooks are the starting point for interacting with the Safe smart account using a React application.

These hooks are built on top of the [Starter Kit](#) , which leverages and abstracts the complex logic from several kits from the Safe{Core} SDK, allowing you to set a React context that gives access to the exposed Safe functionality everywhere in your application.

[@safe-global/safe-react-hooks](#) The following guides show how to use the Safe React Hooks and integrate it into your project:
