

Hey guys, i'm thrilled to introduce [aave-v3-react](#), a brand new SDK targeting the react ecosystem which will make developing aave-based dApps feeling like a breeze!

The SDK is a reactive wrapper on top of the [aave-utilities](#) which remove all the burdens of developing aave dApps thanks to a contract provider and a selection of hooks writing and reading to/from the V3 pools.

If u are planning o developing a new app or refactoring an existing one, this is the way to go

Please check the following links to know more, [and consider supporting the project in the latest Gitcoin round from AGD!](#)

Thanks a lot to [@aavegrants](#) for making this possible!
