

# CCIP Supported Networks Mainnet - v1.2.0

## Mainnet Access

[Apply for Mainnet Early Access](#) to start building on mainnet.

## Early Access

Chainlink CCIP is in the “Early Access” stage of development, which means that Chainlink CCIP currently has functionality which is under development and may be changed in later versions. There is no guarantee any of the contemplated features of Chainlink CCIP or the Chainlink Network will be implemented as specified. Chainlink CCIP is a messaging protocol. Chainlink does not hold or transfer any assets. Please review the [Chainlink Terms of Service](#) which provides important information and disclosures. By using Chainlink CCIP, you expressly acknowledge and agree to accept these terms.

## Deprecation Notice for CCIP v1.0.0 on Mainnet

CCIP v1.0.0 has been deprecated on mainnet. You must use the new router addresses listed in this page before March 31st, 2024. Please note that there is no change to the router interface. The CCIP v1.0.0 mainnet routers will continue to function in parallel until March 31st, 2024, but we highly recommend switching to the v1.2.0 routers as soon as possible. If you currently use CCIP v1.0.0, use the [@chainlink/contracts-ccip npm package version 0.7.6](#). To migrate to v1.2.0, use [version 1.2.1 of the npm package](#) or later. Please refer to the [release notes](#) for a comprehensive overview of the enhancements and new features in v1.2.0.

The configurations detailed on this page refer to [token pools](#) and [CCIP rate limits](#). Each supported token has a [token pool](#) to facilitate various operations for transferring token value, and to enable [rate limits](#) on token transfers. There are [rate limits for each individual token pool](#) and also [aggregate rate limits](#) that apply to all supported tokens on a particular lane. Both types of rate limits have a maximum capacity and a refill rate.

This page also lists the supported fee tokens for each lane, which shows how you can pay for CCIP fees. The [CCIP Billing](#) page explains how CCIP fees are calculated.
