

I guess as the holders of UNI token, we do need to see buyback support from Uniswap team.

How about confirm to use 20% from all received Uniswap income (project income, not liquidity providers fees) to buy and burn UNI (to grow UNI price?)

In simple words, current revenue flow:

1. Get fees
2. pay to liquidity providers
3. keep rest as profit Uniswap - 20% from this flow to buy and burn.
