

hey everyone!

I'm Ian - DevRel manager, working with Ethereum dev tools (no name to avoid promoting). currently we're working on Ethereum Account Abstraction explorer , and we need your help to understand what may be missing for developers and builders.

if you have 5-10 minutes on your hands, please fill out this form! it would be a great help for us to shape the best version of the tool. or simply share your thoughts on this tool: is it practical, do you use such explorers, etc

form: <https://forms.gle/7krvLomzc7nUqHPt6>
