

I'm trying to install aztec in my ubuntu 24.04 box. docker is running (version 27.3.1, build ce12230), gnome is installed (the version that comes with 24.04), so is node.js (v18.19.1) and npm (9.2.0). When I ran `$bash -i <(curl -s https://install.aztec.network)` in a terminal, the installation gets stuck after the Do you wish to continue? (y/n) message. I picked y, pressed enter, and it's been stuck for hours. I haven't found any similar topic in this forum or elsewhere, so not sure how to proceed.
