

Hi

So sorry if that might sound like a stupid question , but I was just wondering are governance tokens just something you can earn for a certain period of time and they after it's done (you can never get them anymore) because I am a student and I put like kind of a lot in the pool to get some cause that's what I kind of understood from everything I have read

I might have not understood properly because I am French Canadian , but except getting a vote ... what else is different than just buying uni on any platform?

Does voting give you something or it actually costs something like just enabling the vote ?

Thank you
