

Hi everyone,

The temperature check for lowering the proposal submission threshold passed the Snapshot poll with overwhelming support (46M supporting votes). I'd like to move this into a consensus check phase.

I am advocating for the proposal submission threshold to be changed from 10M UNI to 2.5M UNI. Instead of a snapshot poll, I'd like to try moving this proposal from consensus check to formal submission using an autonomous proposal. I have created a [proposal on Fish.vote](#) to enact this change. If this proposal receives 10M delegate votes, it will become an official proposal that is voted on by the community. As opposed to a Snapshot vote, this proposal already contains all of the on-chain logic needed to make this change, so there is no ambiguity in terms of what you're voting for.

Please check out the full proposal at this link: [Reduce the UNI proposal submission threshold to 2.5M](#)
