

FAQ

Frequently asked questions about session keys

Can session keys be used to sign a message on behalf of the user ?

For now, session keys only support transactions and meta-transactions

Does the dapp need to manage nonces ?

Yes ! With session keys, the users interact directly with the dapp, meaning that the Argent wallets cannot take care of nonce management.

It is up to the dapp to keep track of nonces locally and increment them as you can't rely on a RPC call to get nonce .
