

Use a single signing key

The key used to [sign transactions](#) can be stored externally using [HashiCorp Vault](#) or [Azure Key Vault](#) , or in a [V3 keystore file](#) .

To [start EthSigner with a single signing key](#) , use the subcommands:

- [file-based-signer](#)
- [hashicorp-signer](#)
- [azure-signer](#) [Edit this page](#) Last updated on Mar 30, 2023 by Eric Lin [Previous](#) [Build from source](#) [Next](#) [Use multiple signing keys](#)
