

In this post: <https://blog.enigma.co/announcing-enigmas-collaboration-with-intel-43bbf73a86a7> the collaboration with Intel was announced. I have 3 questions regarding this collaboration:

1. What does this mean for Enigma in terms of support? (Technical, information, research, developers, etc)
2. Has this collaboration changed due to the price movement of the market?
3. Is this collaboration exclusive in the crypto landscape for Enigma?
