

# OssifiableProxy

- [Source code](#)
- [Source code of WithdrawalsManagerProxy](#)

Deployed instances:

- [LidoLocator](#)
- [StakingRouter](#)
- [WithdrawalQueueERC721](#)
- [WithdrawalVault](#)
- (uses WithdrawalsManagerProxy)
- )
- [AccountingOracle](#)
- [ValidatorsExitBusOracle](#)

A common proxy contract that used for Lido non-Aragon upgradable contract deployments. Follows the [ERC1967](#) proxy standard and allows ossification (set proxy owner to zero address) for the final implementation version. [Edit this page](#)
