

Congratulations on the recent development by Arbitrum's team on tackling the [Delay Attack on Rollups](#).

Cartesi is another Optimistic Rollups solution that has also been researching this same problem. And given the broader interest on the issue, we've decided to published a preliminary version of our permissionless validator solution on [arXiv](#). We hope it can add to Arbitrum's work on the issue.

We at Cartesi are excited to connect with anyone who's interested in discussing this topic.
