

Mantle

Decentralized Infrastructure Network (DIN) Mantle is supported through the [DIN](#) service, meaning calls to the network are routed to [partner infrastructure providers](#) .

Infura provides public beta access to the Mantle network. Mantle, an Ethereum layer 2 scaling solution, uses an optimistic rollup architecture and a modular design to enhance user and developer experiences with improved data availability.

This approach not only ensures cheaper and more accessible data but also maintains the robust security inherent to Ethereum, making it an efficient and secure choice for scaling Ethereum applications.

See also For more information, see the [official Mantle documentation](#) . Select one of the following options to get started with the Mantle network:

[## Quickstart](#) [Learn how to quickly connect and make calls to the Mantle network.](#) [## JSON-RPC APIs](#) [View the APIs available for communicating with the Mantle network.](#) [## Create an API key](#) [Learn how to create an API key and secure and share it with your team.](#)

Partners and privacy policies

The following partner provides access to the Mantle network:

- 0xFury ([Privacy policy](#))
