

As of the last YugaLabs discussion about OTHERSIDE & possibility of its own chain,

I would like to ask if it can be a multi-chain with bridging features.

This can bring more users and they can decide where they would like to trade their assets.

Also I would like to discuss the possibility of cross- chain marketplace writhing the platform as well as its own marketplace on several chains.

This will allow to expand the type developers for the platform and WEB3 assets will be tradable there in larger quantities.

Now we have companies & folks creating the 3D fashion and skins as well as environment and design interior/exterior items sold with access to different types of 3D files. This type of assets does not need the functions of interaction (interoperability in its core) to be build writhing the platform as all, some objects can look slightly different but then different files can be used.

I also encourage everyone to lear a little bit more about technicality, type of movable objects build (like 2 or 3 joints style, gravity effect, ets) , so you can understand more what to build writhing the platform and what functions are crucial to program for the objects and as well - platform developers to build those for simple objects.

The objects that need functions to affect other objects and work at the platform (tools, weapons, mechanical tools, cars,... ets) - they will be most likely much later .

Crucial part of bringing them - it's having those interoperability/affect functions build. Thinking about this part we also have to have a friendly place for EXPENDABLE assets (food, medicine, pills of some sort of booster style, any consumables, drinks itself even, bullets, fuel, other objects that change functions but disappear later) - let's think about chains, objects or avatars in effect and so on.

And now I want you to think about the hardest thing ever, imagine all functions and build it's require and interaction: THIS ABOUT SEASONS...

Expendable or changeable interactive items...

Imagine the snow machine being sold to you...

The most difficult - snowflakes that melt or change into ice forming ice.

You you don't understand where I'm going yet - ask please.

But main think first:

what chains do we need to have available?

and what marketplace should it be?

This is a discussion about OTHERSIDE.

Thank you.
