

Caster.io Truffle Starter Box¶

Use this [Truffle Framework](#) starter box with the [Caster.io](#) Blockchain track lessons.

Installation¶

- Install truffle globally `npm install truffle -g`
- Unpack the box with `truffle unbox CasterIO/truffle-starter`

Using Docker¶

If you encounter issues building the project locally, you can use the provided Docker image.

Note: This method will not update your Docker image each time you change the code. After every code change, you will need to redeploy your docker container using the following steps:

deploy your Solidity contract

```
truffle migrate
```

build the Docker image

```
docker build -t caster_truffle:latest .
```

launch the Docker container

```
docker run -p 3000:3000 caster_truffle:latest
```
