

Overview

The LP Bootstrap via Auction contract facilitates NTRN-NATIVE Neutron pool initialization during the protocol launch.

Phase 1 :: Bootstrapping NTRN and NATIVE Side of the LP Pool

- Airdrop recipients and lockdrop participants can delegate part / all of their NTRN
- rewards to the auction contract.
- Any user can deposit UST directly to the auction contract to participate in the LP bootstrap auction.
- Both UST deposited & NTRN
- delegated (if any) balances are used to calculate user's LP token shares and additional NTRN
- incentives that he will receive for participating in the auction.

Phase 2 :: Post NTRN-NATIVE Pool initialization

- NTRN
- reward withdrawals from lockdrop & airdrop contracts are enabled during the NTRN-USDC
- /NTRN-ATOM
- Pool initialization.
- NTRN-USDC
- /NTRN-ATOM
- LP tokens are staked with the generator contract, with LP Staking rewards allocated equally among the users based on their % LP share
- NTRN
- incentives are directly claimable
- Users NTRN-USDC
- /NTRN-ATOM
- LP shares are vested linearly on a 90 day period [Previous Queries](#) [Next Messages](#)
