

Verify signature of undeployed account

In order to verify the signature of an undeployed account, you will need to provide a flag to Argent X which will let users sign with their undeployed account:

Pass skipDeploy=true in the signMessage

...

```
Copy account.signMessage( { domain:{ name:"Example DApp", chainId:windowStarknet.chainId, version:"0.0.1", }, types:{
StarkNetDomain:[ { name:"name",type:"felt"}, { name:"chainId",type:"felt"}, { name:"version",type:"felt"}, ], Message:[{
name:"message",type:"felt"}], }, primaryType:"Message", message:{ message, }, }, // @ts-ignore { skipDeploy:true}, )
```

...
