

Glossary

- Transparent address
- :
- Has atnam
- prefix. When transferring from one transparent address to another, transaction details such as the sender, receiver and amount are publicly visible.
- Shielded address (aka: Payment address)
- :
- Has aznam
- prefix. This is the public-facing address which can be shared with others in order to receive funds. When transferring from one
- shielded address to another, transaction details such as the sender, receiver and amount are hidden from anyone who does not have an associated
- spending or viewing key.
- Spending key
- :
- Has azsknam
- prefix. Authorizes the holder to spend funds from associated shielded address. The spending key is also used to derive the viewing key and payment address.
- Therefore, the spending key will also allow the user to view the balance and transaction data of the associated address.
- Viewing key
- :
- Has azvknam
- prefix. Allows the holder to view incoming and outgoing transactions for a specific shielded address, but does not permit spending funds.
