

#

Install

#

Installgo

TIP

Go 1.15+ is required for building and installing the IRIShub software. Installgo by following the [official docs](#) [open in new window](#) .

Remember to set yourGOPATH ,GOBIN , andPATH environment variables, for example:

```
mkdir -p HOME /go/binecho "export GOPATH=HOME /go"
```

```
~/bashrcsource ~/.bashrcecho "export GOBIN=GOPATH /bin"
```

```
~/bashrcsource ~/.bashrcecho "export PATH=PATH :GOBIN "
```

```
~/bashrcsource ~/.bashrc Verify thatgo has been installed successfully
```

go version

#

Installiris

After setting upgo correctly, you should be able to compile and runiris .

Make sure that your server can access to google.com because our project depends on some libraries provided by google. (If you are not able to access google.com, you can also try to add a proxy:export GOPROXY=https://goproxy.io)

git clone https://github.com/irisnet/irishubcd irishubgit checkout< version> make install If your environment variables have set up correctly, you should not get any errors by running the above commands. Now check youriris version.
