

AIP Name:

[AIP-369: Empowering ApeCoin Sub-communities with Fundraising on Twitter via IDriss](#)

Implementation Status:

Pending

Author:

[@jarisjames](#)

Abstract Summary:

IDriss is an open-source protocol and browser extension (75k+ weekly users) that seamlessly integrates Twitter with the web3 world by linking public wallet addresses to Twitter usernames. Through their Chrome extension, IDriss enables Twitter users to natively send and receive crypto, including the facilitation of perpetual donations. IDriss proposes to integrate with ApeCoin DAO to introduce a mechanism for perpetual donations, greatly benefiting ApeCoin's vast sub-communities. By linking public wallet addresses to Twitter usernames through IDriss, these sub-communities can seamlessly launch and manage donation campaigns directly on Twitter.
