

function-arguments)

- Example

expectedTradeReturn()

...

```
Copy functionexpectedTradeReturn(Token token,uint128sourceAmount)externalviewreturns(uint128targetAmount);
```

...

Using this function, one can query the contract indicating the source token amount they would like to use, and receive an indication of the expected target token amount.

Note that since the rate changes over time, the target amount of tokens might grow with time as the price changes.

Function Arguments

Name	Type	Description
token	Token	The token address of the token you would like to trade out of the contract
sourceAmount	uint128	The amount of source tokens you are willing to trade out of your wallet against the indicated token

Example

...

```
Copy expectedTradeReturn( 0x1f573d6fb3f13d689ff844b4ce37794d79a7ff1c,//token address  
1000000000000000000//source token amount indicated in wei ) returns( 4027872880331900000000//the returned amount  
of target tokens )
```
