Welcome to the inaugural chapter of 0Kage Dairies

! Every month, I plan to conduct deep-dive analyses of interesting black-hat attacks and bug bounties. The main goal is to uncover the root causes of vulnerabilities, gain insights into the mindset of black-hat hackers, and explore some interesting smart contract concepts & design choices that create these vulnerabilities. Throughout this series, I will share my learnings & analysis from a security standpoint and include POCs wherever I can.

It's important to note that each article in this series will be thorough. I created this primarily as a reference for myself in the future. I understand they might be longer than usual, but I believe providing a comprehensive exploration of each topic is essential. Let's roll!
