

Faucet

To make any transactions on our testnet, you need testnet tokens. These are used only for the purpose of development and have no real value.

Currently, the only way to receive those is via Discord. This is done to prevent abuse and make sure every developer has access to testnet tokens.

The faucet currently dispenses 1 GAL, allowing for about 150-200 calls to the oracle.

To get testnet tokens:

1 Join Discord

Join our [Discord server](#) and go to the #testnet-faucet channel. 2 Post request

Post a message in the #testnet-faucet channel following this exact format, replacing *with your EVM wallet address*.

!faucet

In a few seconds, you should receive the testnet tokens in your wallet.
