

Etherscan is reporting wrong price for Socks. Uniswap wallet is taking the wrong price feed from Etherscan and republishing it. And the root cause for it is Pulsex exchange. As I understand it- Pulsex exchange is trading copy's of tokens(I didn't try it- don't intend to do so- it is a scam). How this is getting to Etherscan is a mystery to me.

Uniswap is its own oracle and should behave like that. All price feeds should come from Uniswap only.
