

Connections

Some webpages can connect to your wallet and enable interactions that otherwise would be not possible.

i By default, the [Fetch ledger browser ↗\(opens in a new tab\)](#) only shows a list of active validators for the Fetch network along with some staking-related details (e.g. the validators' commission rates and number of delegated FETs). If you have your wallet set up on the browser, you will see a button for connecting your wallet in the top right of the page, and if you do, you will get the option of staking your FETs with any of the validators on the list and accessing your staking dashboard. Visit the [staking ↗](#) and [Different ways of staking FET tokens ↗](#) guides available within our documentation for a better understanding of the steps needed to carry out such operations.

⚠ If you view such web pages using a browser with the Fetch wallet, you will see additional options. If you use a browser with no wallet, those options will not be shown at all! You can manage these connections directly on the wallet in the following way:

1. From the wallet dashboard, click the ☰ icon in the top left, then Settings
2. .
3. Click on Manage Connections
4. .
5. **i**
6. Here, you will see a list of web pages which have been connected to your wallet. Visiting these pages will not ask you for a connection with your wallet again; the page will automatically connect.
7. You have the option of removing and thus revoking these connections. If you do, the next time you visit that page, it will not automatically connect to your wallet.
8. You can remove a connection by clicking the ✕ icon on the connection you wish to remove.
