

Undelegate from an Operator and Initiate Withdrawal

Restakers can Undelegate their balance from an Operator at any time. Undelegation flows are the same for both Native and LST Restakers.

warning Initiating an Undelegate transaction will also automatically queue a withdrawal (Unstake) of your funds. The Undelegate and Queue Withdrawal transactions are combined due to the security architecture of EigenLayer smart contracts. Step 1: Navigate to the Operator tab, click the tile for the Operator you have delegated your funds to. Click the Undelegate button to continue.

Step 2: Confirm the two transactions in your Web3 wallet.

Step 3: Observe that your Restaked balance is now 0.0 ETH.

Step 4: Visit the Token tab and relevant asset page to observe your Unstaked balance has increased the corresponding amount. [Previous Redelegation Process](#) [Next Restaking Developer Guide](#)
