

filter

Acknowledges all records that get passed to the filter.

Description

Acknowledges all records that get passed to the filter, so the records will be filtered out if the condition provided to the processor is evaluated to true.

Important: Make sure to add [a condition](#) to this processor, otherwise all records will be filtered out.

Configuration parameters

- YAML
- Table

version :

2.2 pipelines : -

id : example status : running connectors :

define source and destination ...

processors : -

id : example plugin :

"filter" No configuration parameters.

Examples

Filter out the record
