
title: MEV-Blocks API

mev-blocks is a a public API for displaying flashbots blocks and transactions.

Access it here: blocks.flashbots.net

New Blocks API fields

For the PoS Ethereum merge, we added new fields to the Blocks API response to align the API with PoS Ethereum nomenclature.

Old fields were left in place for backwards compatibility with clients, and have been retrofitted to populate with data from the Flashbots builder.

Parent Type	Old Name	New Name
blocks	miner	fee_recipient
	miner_reward	fee_recipient_eth_diff
coinbase_transfers	eth_sent_to_fee_recipient	
	total_miner_reward	fee_recipient_eth_diff
transactions	total_miner_reward	fee_recipient_eth_diff
	eth_sent_to_fee_recipient	

:::note

Old names will be removed in a future release.
