

I am new to participating in any sort of governance forums, but I simply wanted to start the conversation of adding the UNI token to be supported collateral on AAVE v3 Optimism and Arbitrum. The UNI token is one of the most widely held tokens and Uniswap does large daily volumes on both the Optimism and Arbitrum network, and with Uniswap being the largest/highest earning protocols next to Ethereum itself I was curious to see why the token is not yet supported on V3 while it's been available as collateral on Aave v2 for a long time. Was hoping to see what the next steps would be for pushing this proposal forward.
