

Taiko is a decentralized, Ethereum-equivalent ZK-Rollup. Taiko extends Ethereum, and you—our community—extend Taiko. This space is for you.

This forum is a space where the community can post research, share ideas & information, ask questions, and engage in discussions that may need a more persistent place than our other community spaces. Ultimately, you will help shape what Taiko uses this space for.

To get started learning more about Taiko or contributing:

- Read the [docs](#)
- Read the [blog](#)
