

Giza CLI

Giza CLI 0.14.1

Welcome to Giza CLI!

This CLI provides the utilities to interact with Giza using the terminal.

What capabilities does the CLI offer?

The CLI will serve as the main entrypoint for Giza Platform for developers. It aims to provide a tool to ease the managing of resources that exists in Giza Platform.

For now it provides the following capabilities:

- User related utilities, like `create`
- `login`
- (JWT Authentication) and `create_api_key`
- (API Key Authentication)
- Model transpilation with `transpile`
- using multiple frameworks, like Cairo or EZKL
- Model versioning
- Proof generation for multiple frameworks, like Orion Cairo or EZKL
- Deployment of models to the Giza Platform as an endpoint for verifiable inferences
- Workspace management to help you with Giza Actions
- Actions jumpstart with `new`
- command to help you get started with your actions
-

In the future each new resource added to Giza will have its corresponding capability in the CLI.
