

Given that current stability reserves had significantly improved since the Accelerated proposal on March 8th, currently standing at 552.8M in USDC PSM and additional 772M in Coinbase Custody, the probability of a necessity for time-critical governance action is thus reduced significantly.

In order to lower the possibility of an hostile governance attack via malicious spell, BA Labs is recommending to the Governance Scope Facilitator to increase the GSM Pause Delay from the current 16h period, but still allow for a faster execution of spells compared to the previous 48h delay.

More information on GSM Pause Delay can be found in the [Governance Scope article 10.1](#).

BA Labs recommends the Governance Responsible Facilitator to perform the following parameter changes to the GSM Pause Delay, which is to be polled via weekly governance cycle and included in the following available executive vote, assuming positive outcome of the poll;

- Increase the GSM Pause Delay by 14 hours, from 16 hours to 30 hours

BA Labs recommends the Governance Responsible Facilitator to update the Governance Scope article 10.1.1A;

10.1.1A:

□□□

The GSM Pause Delay is:30 hours
