

Sign Up with Email/Social

Introduction

When it comes to onboarding users, having a flexible sign-up flow that can accommodate different preferences is key. Whether users prefer to sign up with their email, social media accounts, or directly with a wallet, providing the options that fit your user's needs can make the onboarding process smoother, more user-friendly, and increase conversion.

That is why we are offering the flexibility to design the sign up screen to suit your needs. You can now choose whether you want users to sign up with their email, social accounts, or with wallets. You can configure this as needed.

If you then want to generate a wallet for your users when they sign up using email or social, please refer [to the embedded wallets section](#) after configuring email/social below.

Sign up with Email

1. Go to the [configurations page](#)
2. in your developer dashboard.
3. Click on the "Email/ Social Auth & Embedded Wallets" card.
4. Toggle on the "Enable email signup" option.

Sign up with Social

1. Go to the [configurations page](#)
2. in your developer dashboard.
3. Click on the "Email/ Social Auth & Embedded Wallets" card.
4. Toggle on the "Enable social signup" option.
5. Click the down button on the far right of the social signup option to expand the configuration options.
6. Configure the individual social signup options as needed following [the social providers section](#)
7. .
