

Instead of incentivizing LP we can use treasury to buy ETH and BTC and add permanent liquidity to Uniswap.

Benefits:

- We are swapping UNI for top assets which value will go up over time.
- There is no dump of new tokens. (New tokens are backed with underlying asset)
- We are earning more from every transaction and LP is growing organically.
- No risk that someone can take liquidity from us.
- As Bitcoin price and Ethereum price go up, the value of UNI assets go up as well.

Risk:

Is it wBTC really decentralized (safe)?

It sounds as win win solution for me.

Please write your thoughts on this idea.

Thank you.
