

Hi, Aave community, I am Daniil Gorbatenko, partnerships and communications manager at Fuse Network. I would like to propose to extend the Aave protocol to the Fuse Network blockchain.

Fuse Network is a fast and low-cost fully EVM-compatible blockchain-based platform focused on making crypto payments and DeFi available to the masses. We are trying to achieve this through combining the blockchain and smart contracts with mobile-centric tools that are designed to remove the frictions for the end user.

Fuse is connected to multiple major blockchain platforms (including Ethereum, Polygon and Avalanche) via several interoperability solutions, including the FuseFi bridge, Multichain (formerly Anyswap) ChainPort, Connex and so on. Well-known DeFi protocols already launched or about to launch on Fuse include Sushi and Beefy Finance.

You can learn more about Fuse on <https://fuse.io> and <https://docs.fuse.io>

Fuse has been undergoing rapid growth lately, our DeFi ecosystem included. We at the Fuse team are big fans of the DeFi innovations Aave has been bringing since its inception, especially the real-world asset markets. We would be delighted to see Aave launch on Fuse!

Benefits for Aave:

- Access to a rapidly growing EVM-compatible platform and ecosystem
- Possibility to leverage the user-friendly mobile-centric tools created by Fuse, including by forking our open-source wallet technology
