

I recently stumbled upon this amusing crypto project called EDEN, based in Poland. There are quite a few blockchain projects that aim to connect with nature, but this one caught me off guard. It has a “Discover to Earn” concept where users get rewarded for walking in the forest, identifying edible plants, mushrooms, and water sources, and sharing this info on their app.

It’s funny to think that you can earn by simply marking locations of wild edibles on their map. It’s definitely an unexpected twist in the crypto world, combining nature exploration with blockchain technology.

What do you guys think? Does this quirky project have any potential? Let’s discuss!
