

Hey everyone,

After I read this article (<https://blog.scrt.network/secret-ethereum-bridge-december-2020/>), some thoughts come to my mind. I think the team should implement a bridge to [Incognito Chain](#) (a privacy-first chain) so that Secret Network would have many bridges to BTC, ETH, XMR, NEO, ZIL, TOMO and soon Binance Smart Chain. Those bridges were already implemented in Incognito Chain and work perfectly. Besides, its AMM has a lot of liquidity. I think this cooperation would provide both sides with some benefits.

Best.
