

Hi Aave Team,

This is not a scam and I am writing this the second time as I have accidentally sent my USDC 2000 to your Aave smart contract account. I appreciate if you could looking into retrieving my tokens. I was informed by your wecare@aave.com email support team to raise a request here for assistance. Here is the proof of the transaction that my tokens from this wallet went into your Aave smart contract Lending Pool V2. wallet. Please check.

This is my wallet:

0x4719b1fff4499f41a14bc098cc440fba6e6a9cd3

And this was a recent transaction I executed:

[Polygon \(MATIC\) Blockchain Explorer](#)

[Polygon Transaction Hash \(Txhash\) Details | PolygonScan](#)

Polygon (MATIC) detailed transaction info for txhash

0x0bd3157cef80a2fd48e89ca0715aade25394512ece0246ddd51d8c344fc6f4f6. The transaction status, block confirmation, gas fee, MATIC, and token transfer are shown.

I am a believer of Aave protocol which I use this platform quite often.

Please assist where applicable. Thanks
