

# Overview

NOTE: this contract is an [Astroport Oracle](#) which is modified to store historical TWAP values .

Oracle contract calculates a 1 day TWAP for a  $xy=k$  Neutron pool and stores historical TWAP values.

The main difference motivated in order to provide a fair price of NTRN to lockdropVotingVault at certain height we have updated astroports oracle to keep the price history (see [TWAPAtHeight at queries](#) section). [Previous Queries](#) [Next Messages](#)
