

Arbitrum Nitro

To support Arbitrum Nitro, we have integrated a small plugin into the DACdserver . This is much like our http sidecar and provides a very modular integration into NEAR DA whilst supporting Arbitrum DACs.

In the future, this will likely be the easiest way to support NEAR DA as it acts as an independent sidecar which can be scaled as needed. This also means that the DAC can opt-in and out of NEAR DA, lowering their infrastructure burden. With this approach, the DAC committee members just need to have a "dumb" signing service, with the store backed by NEAR.

info You can find more details about the Arbitrum Nitro integration in our [near/nitro GitHub repository](#) . [Edit this page](#) Last updated on Feb 20, 2024 by Damián Parrino Was this page helpful? Yes No
