

Carrier

Bring it home on Carrier [Carrier](#) is a powerful token and NFT cross-chain bridge built for Web 3 natives, powered by [Wormhole](#) . It has several advanced features including concurrent transactions, robust wallet management and a fully functional keyboard interface.

True to Automata's privacy first ethos, Carrier has zero user tracking, preventing any storage of data and metadata from the users session. Carrier blockchain requests, such as balance queries, are sent to our hardware secure enclave RPC relay, preserving user privacy. When used in combination with a wallet using [1RPC](#) endpoints the user will benefit from best in class privacy.

?
