

As described in the [Simple DVT Module Proposal Snapshot vote](#) and [recent update](#), the Simple DVT Module Committee (SDVTMC) is a multi-sig responsible for creating and executing Easy Tack motions specifically for the Simple DVT Module that can create new clusters, activate and deactivate existing clusters, raise and lower cluster key limits, and change cluster manager and reward addresses.

All on-chain actions taken by the SDVTMC will be posted publicly to the forum, with a 7-day discussion period for any decisions related to creating new clusters, activating existing clusters, and raising cluster key limits.

The DAO retains

the right to a final decision: LDO holders have a 72-hour opportunity to veto any Easy Track motions and community members may post a Snapshot vote to change or counteract SDVTMC decisions and/or reconstitute the SDVTMC with different participants.

Based on interest received from various parties, the proposed composition of the SDVTMC is the following and will be run as a 4/7:

George B. ([@syncnode](#)), CEO of Syncnode and representing the LNOSG

Andrew ([@Andrew_KukisGlobal](#)), CTO of Kukis Global and representing the LNOSG

Francesco ([@francescoSimply](#)), co-founder of Simply Staking and representing the LNOSG

Thomas ([@Thomas_Obol](#)), representing Obol Labs

Eridian ([@Eridian](#)), representing the SSV DAO

George A ([@George](#)), Lido DAO contributor

Will ([@KimonSh](#)), Lido DAO contributor (myself)

EDIT Feb 12, 2024

The Simple DVT Module Committee multisig has been created and all members of the committee have verified their signing addresses below. The Safe's address is 0x08637515E85A4633E23dfc7861e2A9f53af640f7
