Block Explorer Glossary

Address : A unique identifier for a wallet or smart contract on the blockchain.

Block : A group of transactions that have been verified and added to the blockchain.

Block Height : The number of blocks in the chain between any given block and the first block (genesis block).

Contract : Also known as a smart contract, it's a self-executing program stored on the blockchain.

Gas : The unit of measure for the computational work required to execute transactions or smart contracts on Ethereum.

Gas Price : The amount of cryptocurrency you're willing to pay per unit of gas for a transaction.

Hash : A unique fixed-length string of characters that represents data. In blockchain, it's used to identify blocks and transactions.

Miner/Validator : Entities that verify and add new transactions to the blockchain.

Nonce : A number used once, typically to verify the uniqueness of transactions.

Pending Transaction : A transaction that has been broadcast to the network but not yet included in a block.

Token : A type of cryptocurrency that represents a tradable asset or utility and is often built on top of an existing blockchain.

Transaction : The transfer of cryptocurrency or data between addresses on the blockchain.

Transaction Fee : The cost to process a transaction on the blockchain, typically paid to the chain miners or validators.

Wallet : A tool that allows users to store, send, and receive cryptocurrency.

Note: Specific terms may vary slightly depending on the blockchain network and the block explorer being used.
