

Dear Community

I have a specific problem, for that I can not find a solution, maybe you can help me and give me an advise.

I order a transaction from my Bank Account to my Keplr Wallet several days ago via Transak. I got an email for a successfull transaction, but the tokens didn't arrived to my Wallet.

I am a newbie in Crypto and I tried to make myself an account. As I found out, I copied a Wallet contract Adress (secret1k0jntykt7e4g3y88ltc60czgjuqdy4c9e8fzek - Is an adress of huge pool nearly 8 Mil SCRT ) and put it down as a name for the new Wallet that I created at the Purchase. So I think that I send the tokens to the wrong Account. Or made something like donation?

Is it possible somehow to get purchased coins back?

I hope to hear from you soon, thanks!
