

Web3Auth PnP Web Modal SDK

This package provides the main class for using the default Web3Auth Modal. The package includes all of our packages and gives you a simple way of implementing Web3Auth within your interface. Additionally, it is a child class of [@web3auth/no-modal](#) package. Hence, you can still call all the functions available in the [@web3auth/no-modal](#) package.

This Documentation is based on the 8.0.0

SDK Version. [@](#)

Requirements

- This is a frontend SDK and can only run in a browser environment
- Basic knowledge of JavaScript
- Supports all major JavaScript Frameworks, Libraries and Bundlers

Resources

- [Quick Start](#)
