

Hi.

I am on making Ethereum <> Secret bridge.

I have some experiences on cosmos sdk and terra chain but little on the secret.

I cloned some git repo from [GitHub - scribblelabs/EthereumBridge](https://github.com/scribblelabs/EthereumBridge) and followed the readme.md.

But it didn't work well on my pc.

I also followed some of other references regarding the secret bridge, but it didn't go well.

So I need some help about my issues and someone who has some experiences on that field.

Please DM if you know that.

Thanks.

Best regards.
